

Implant #8 with Crown

Background: JM had a crown on her front tooth done as a child due to trauma. Her 3rd crown on this same tooth caused the tooth to fracture and she now wants an implant supported crown. She had the implant placed the same day as the tooth extraction. As a temporary tooth while the implant heals, she decided to use an essix appliance so that the roof of her mouth isn't covered.

Testimonial: "It was easier than I expected. The process was actually smoother than I anticipated and I am so pleased with the end result!!!"
